SUMMARY

AI Engineer shipping production systems that bridge software and the physical world. Built RAG pipelines over dense regulatory documents, real-time multi-agent AI pipelines orchestrating video/image/voice generation, and interactive 3D visualization platforms — all deployed to live audiences. Background in electrical design gives me native fluency with construction documents, building codes, and hardware systems that most software engineers lack.

EXPERIENCE

AI Engineer | Abundance Institute (Non-profit policy lab) 01/2026 to 05/2026

- Architected and presented at SXSW 2026 a 3-component system (Flutter tablet + Node.js backend + React TV display) generating personalized AI vision plans via a parallel pipeline of Claude, OpenAI image gen, ElevenLabs narration, and LTX video generation. Runs end-to-end in 10-15 min per user.
- Built a production Python pipeline producing cinematic AI video series across 6 themes for Governor Cox's Operation Gigawatt Summit, orchestrating Veo 3.1, ElevenLabs, and Suno with ffmpeg assembly and clip reuse.
- Built an immersive Three.js panoramic visualization platform for 4-screen displays with real-time resolution simulation and interactive camera controls.

AI Engineer | Alpha School Incubator (EdTech startup, 2-hr school day model)

04/2025 to 12/2025

- Prototyped LLM-powered learning tools for a school where students complete full curriculum in 2 hours/day at 2x the pace of public schools, verified via MAP standardized testing.
- Researched and developed AI tutoring approaches integrating LLMs into the learning workflow, exploring personalized pacing and adaptive content delivery.

Electrical Designer

01/2024 to 01/2025

- Designed electrical systems for residential and commercial construction projects using Revit and AutoCAD, working directly with NEC and IECC building codes — the same dense, cross-referenced regulatory documents now being automated by construction AI.

PROJECTS

Rule Check — rulecheck.ai

Launched

- RAG pipeline over the complete NFHS basketball rulebook with knowledge point extraction, intelligent Q&A, and an accuracy benchmark for evaluating retrieval quality. Built with FastAPI, Supabase, and Python.

Navi — chatnavi.ai

Launched

- Branching LLM conversation tool enabling non-linear exploration of AI responses. Live in production.

LlamaBar

Launched

- Chrome extension for in-browser AI research with personal API keys and local LLM support.

EDUCATION

Computer Science | Western Governors University

2023 to 2025

Over 100 credits completed in computer science fundamentals.

AI Development | Gauntlet AI (2% acceptance rate)

01/2025 to 03/2025

- Shipped 10+ production AI systems in 12 weeks (80-100 hrs/week) spanning fine-tuning, RAG, agentic workflows, and full-stack applications.

Electrical Engineering | Brigham Young University

2021 to 2023

SKILLS

Python • TypeScript • RAG Pipelines • Agentic Systems • LLM Orchestration • React / Next.js • FastAPI / Node.js • Three.js / WebGL • Fine-tuning • Flutter • DevOps / AWS • REST & GraphQL APIs • English (Native) • Korean (Professional)
